
Partition micromet. trials
$\mathrm{mm}(A) = \bigcup_{k=1}^{5} \mathrm{mm}(A,k)$
$p \in \{10, 20, 40, 80, \mathrm{all}\}$
For each $k = 1, \ldots, 5$: train or fine-tune one model using $\mathrm{mm}_{p,k}(A)$
Evaluate the corresponding model on the held-out fold $\mathrm{mm}(A,k)$
5 models 5 independent MAE values
$p = 0$: no target micrometeorological fine-tuning
Train one model without target micrometeorological trials $\mathrm{mm}_{0,k}(A) = \emptyset$
Evaluate the same model separately on each fold $\mathrm{mm}(A,k)$, $k = 1, \ldots, 5$
1 model 5 independent MAE values
Evaluation metric: mean absolute error (MAE) of final cumulative ammonia emissions.
